Recommendation Letter for Raza Ul Azam

To whom it may concern,

For the last six months, I have had the pleasure of jointly supervising Raza as he works towards his Master thesis on the topic of improved uncertainty estimation for deep neural networks. Despite not having a significant background in this specific subfield, Raza was able to simultaneously and efficiently get up to speed with the state of the current research on the topic, as well as begin to implement complex models and methods from the literature. Importantly, during this process, he was always willing to ask intelligent questions when something was unclear, or a motivation was lacking – this scientific way of thinking greatly increases the efficiency of a collaboration, and enabled him to focus on what was crucial to get him going on a relatively short thesis project.

Since his first couple of months, Raza has continued to impress with both his coding ability and research acumen. He is able to write not only his own, structured and well-performing code, but is also to adapt existing implementations for his project. During our regular meetings, he always comes with a clear, structured presentation of his recent results, and brings his own unique ideas for follow-up experiments to the table. His work has provided valuable contributions to the topic, and will be polished and submitted to a top conference in the field.

In addition to his efficiency and excellent work, he is also a pleasure to communicate with, and was an ideal collaborator. Based on my experience working with him, I highly recommend Raza as a future employee.

Mit freundlichen Grüßen
